

Latency: one 1080p frame lives inside a hard 33.3 ms budget (30 fps)

secure ingest on one BlueField-3 Arm core — **12.5 ms** (38% of budget)

Throughput: the accelerator's time is the scarce resource, spent per frame × every node

crypto + preprocess
on the accelerator

crypto + preprocess
on the DPU

the displaced slice is inference the accelerator never runs — and it recurs on every frame, across the whole fleet
